

COLD STORM

SALT BRINE ENHANCER

SALTWORX®

COLD STORM

MELTS AT COLDER TEMPERATURES

Cold Storm salt brine enhancer works as a crystallization inhibitor and lowers the freeze point of salt brine. When added at 30% the observed freeze point is lowered to -28°F. Different add rates of Cold Storm, result in different freeze points, which results in more effective anti-icing.

USE LESS / GET MORE

A little goes a long way. With recommended add rates of 10 - 20 - or 30% - YOU are in control of the storm!

STICKS TO THE ROAD

Cold Storm creates a residual effect ensuring brine sticks to the road. This prevents salt brine from drying out and blowing away.

FLEXIBILITY

Cold Storm allows users to custom tailor their salt brine to the conditions of the storm. Different storms require different levels of anti-icers and Cold Storm provides this flexibility.

LESS CORROSIVE

Cold Storm mixed into salt brine can reduce corrosion up to 43%. This helps protect bridges, guardrails, and light poles against corrosion and will prolong the life of your equipment.
